

A Practical Introduction to Reproducible Computational Workflows

Make your code reproducible by
anyone, anywhere

Tools and Infrastructure

Computational Notebooks:
Jupyter Notebook
Jupyter Lab

Cloud environment to run
computational notebooks
(including RStudio)

Source package and
environment
management system

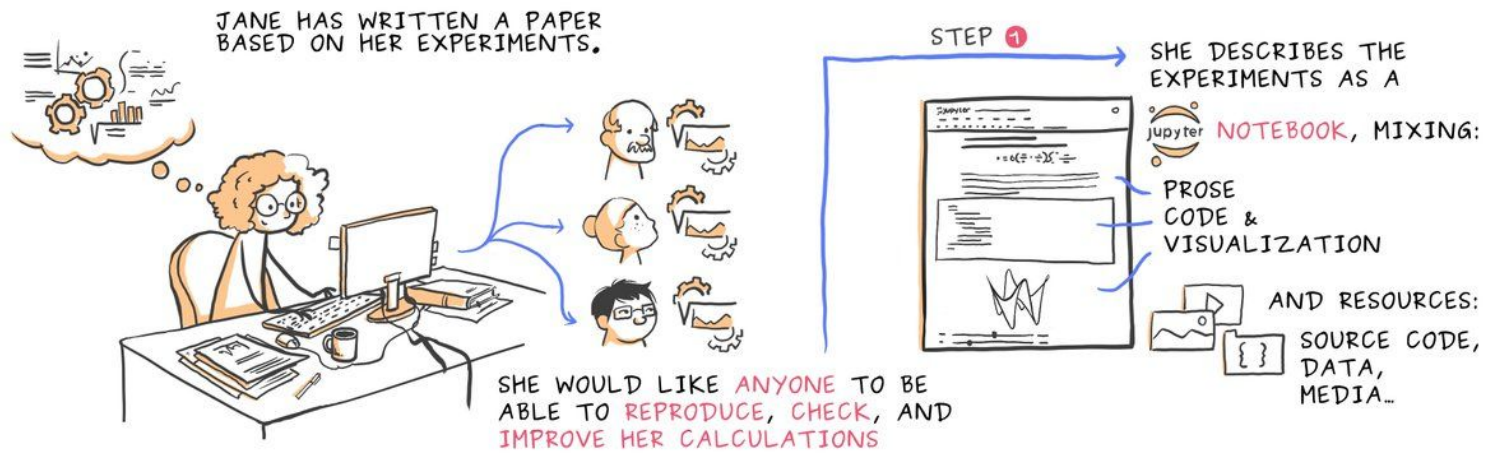

Source code
repository

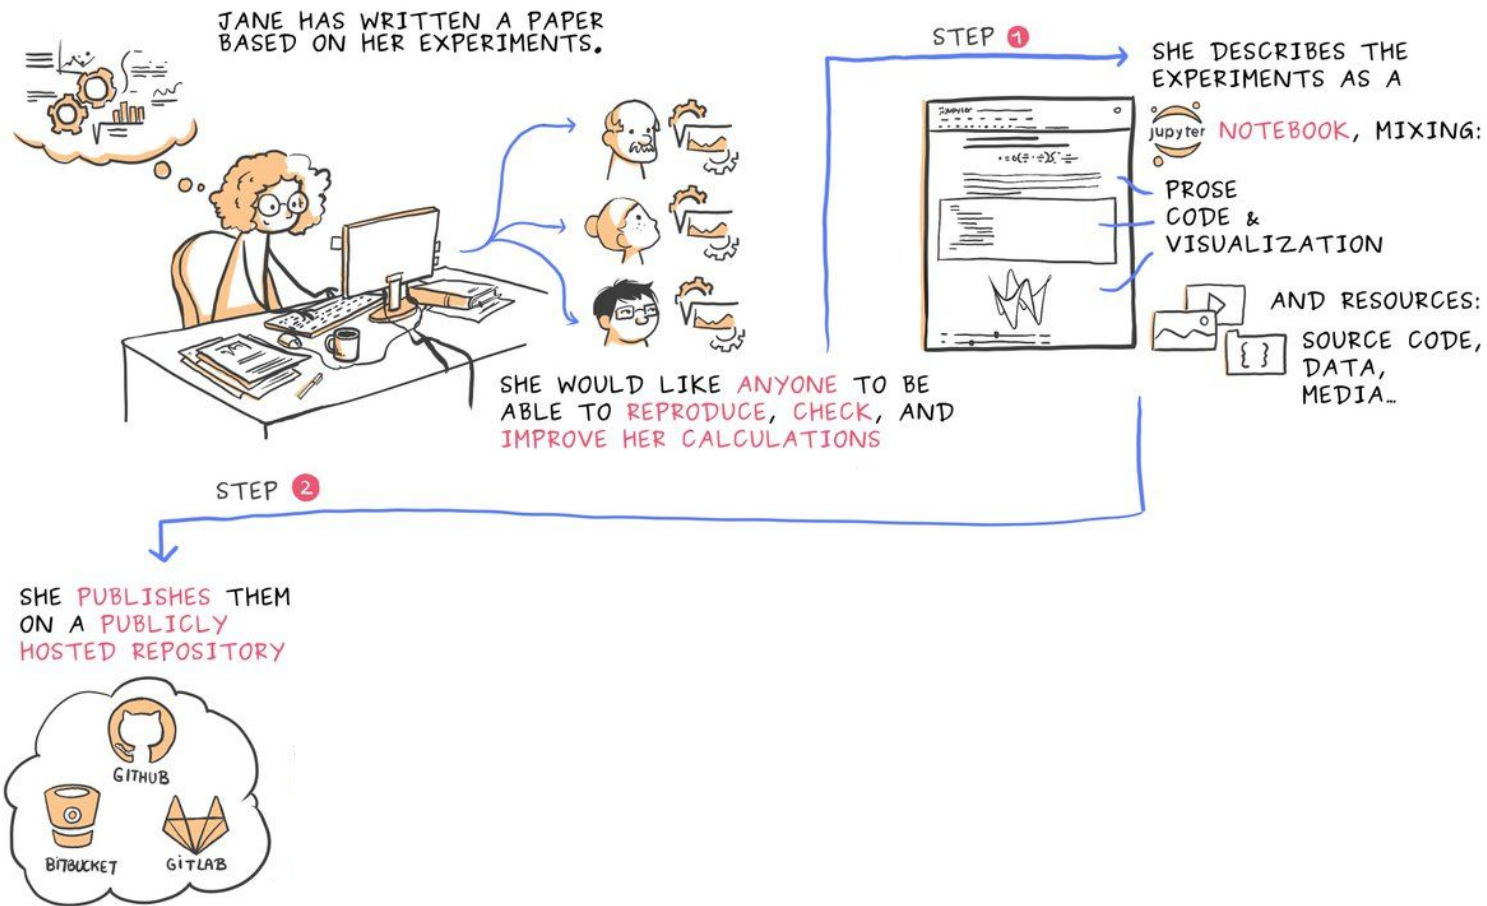

The binder Project

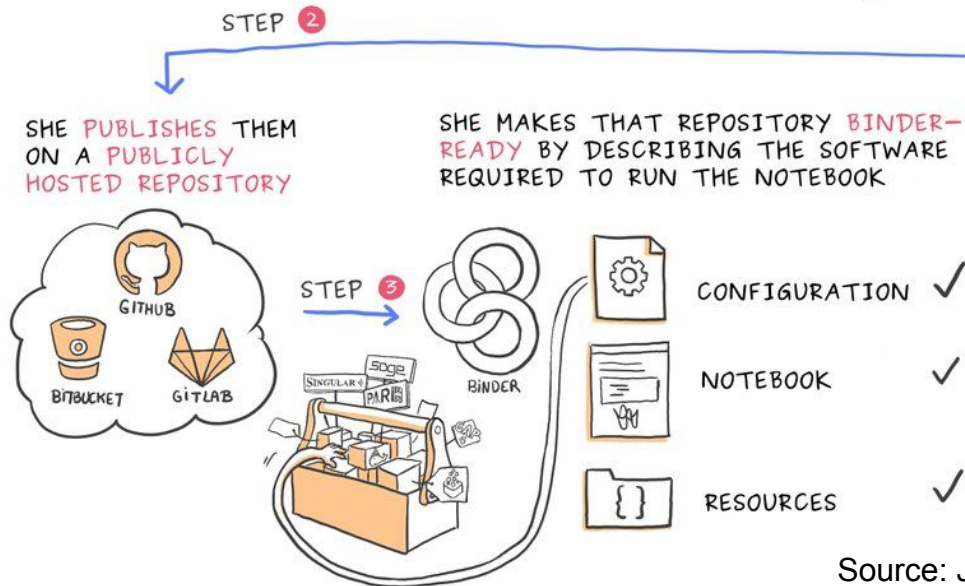

A community that builds **free and open-source** tools
for **reproducible, sharable scientific environments**
that are **workflow- and platform-agnostic**.

JANE HAS WRITTEN A PAPER
BASED ON HER EXPERIMENTS.

SHE WOULD LIKE **ANYONE** TO BE
ABLE TO **REPRODUCE, CHECK, AND**
IMPROVE HER CALCULATIONS

STEP 1

SHE DESCRIBES THE
EXPERIMENTS AS A
 **NOTEBOOK**, MIXING:

PROSE
CODE &
VISUALIZATION

AND RESOURCES:
 **SOURCE CODE,**
 **DATA,**
 **MEDIA...**

STEP 2

SHE **PUBLISHES** THEM
ON A **PUBLICLY**
HOSTED REPOSITORY

SHE MAKES THAT REPOSITORY **BINDER-**
READY BY DESCRIBING THE SOFTWARE
REQUIRED TO RUN THE NOTEBOOK

STEP 3

CONFIGURATION ✓

NOTEBOOK ✓

RESOURCES ✓

EVERYONE CAN NOW RUN AND
REPRODUCE HER COMPUTATIONS

STEP 4

How to configure a Repository for Binder?

“Binderize a repository”

Mybinder.org uses the files in **/binder** folder to create a conda environment.

The software dependencies are specified in environment.yml.

Branch: master ▾ [reproducible-computational-workflows](#) / binder /

 pwrose added postBuild file for py3Dmol

..

 [environment.yml](#) added binder and environment.yml

 [postBuild](#) added postBuild file for py3Dmol

environment.yml

name: ismb2019

channels:

- conda-forge

dependencies:

- python=3.7
- numpy
- pandas
- matplotlib
- seaborn
- scikit-learn

Documentation: <https://mybinder.readthedocs.io>

Jupyter Lab Plugins

- Some interactive packages require a Jupyter Lab plugin, e.g.
 - py3Dmol
 - ipywidgets
 - These plugins are specified in the postBuild file
 - <https://github.com/ISMB-ECCB-2019-Tutorial-AM4/reproducible-computational-workflows/binder/postBuild>

How to Launch Repo on <https://mybinder.org>?

<https://github.com/ISMB-ECCB-2019-Tutorial-AM4/reproducible-computational-workflows>

Build and launch a repository

GitHub repository name or URL

<https://github.com/ISMB-ECCB-2019-Tutorial-AM4/reproducible-computational-workflows>

GitHub ▾

Git branch, tag, or commit

Git branch, tag, or commit

Path to a notebook file (optional)

Path to a notebook file (optional)

File ▾

launch

Copy the URL below and share your Binder with others:

<https://mybinder.org/v2/gh/ISMB-ECCB-2019-Tutorial-AM4/reproducible-computational-workflows/master>

Copy the text below, then paste into your README to show a binder badge:

 launch binder

Make your code reproducible by anyone, anywhere

Share a link with your collaborators

Copy the URL below and share your Binder with others:

`https://mybinder.org/v2/gh/pwrose/reproducible-computational-workflows/master`

Add a Jupyter Notebook launch button to your repository README.md file

Copy the text below, then paste into your README to show a binder badge:

`\[\[Binder\]\(https://mybinder.org/badge_logo.svg\)\]\(https://mybinder.org/v2/gh/pwrose/reproducible-co`

Launch Link for a Specific Notebook

Build and launch a repository

GitHub repository name or URL

GitHub ▼

Git branch, tag, or commit

Path to a notebook file (optional)

File ▼

launch

Copy the URL below and share your Binder with others:

<https://mybinder.org/v2/gh/pwrose/reproducible-computational-workflows/master?filepath=3-jupyter%2Fjupyter-test.ipynb>

How to create a Launch Button for Jupyter Lab?

By default binder links to Jupyter Notebook

Copy the URL below and share your Binder with others:

```
https://mybinder.org/v2/gh/pwrose/reproducible-computational-workflows/master
```

To launch Jupyter Lab append **?urlpath=lab** to the launch link:

<https://mybinder.org/v2/gh/pwrose/reproducible-computational-workflows/master?urlpath=lab>

To launch a specific notebook in Jupyter Lab append

?urlpath=lab/tree/path-to-notebook/notebook.ipynb to the launch link:

<https://mybinder.org/v2/gh/pwrose/reproducible-computational-workflows/master?urlpath=lab/tree=3-jupyter/Jupyter-test.ipynb>

Hands-on Session

Binderize your Repository

<https://github.com/ISMB-ECCB-2019-Tutorial-AM4/reproducible-computational-workflows/5-binder/README.md>

Other Options to Share Jupyter Notebooks

- CyVerse VICE (Visual Interactive Computing Environment)
 - <http://learning.cyverse.org/projects/vice/en/latest/index.html>
 - **Free**, account sign-up required
 - More CPUs, memory and persistent storage (default 100MB)
 - Run notebooks for up to 48 hours
 - Suitable for production and compute intensive tasks
 - Supports Jupyter Lab, RStudio, Shiny applications
 - Funded by the US National Science Foundation
- Demo
 - <https://github.com/sbl-sdsc/mmtf-genomics>

Other Options to Share Jupyter Notebooks

- Commercial
 - Suited for ad hoc sharing of single Notebooks, not reproducible research
 - Google Collaboratory (uses Google Drive to share single Notebooks)
 - <https://colab.research.google.com>
 - Pros: more CPU, RAM and GPUs
 - Cons: limited options to customise execution environment
 - Microsoft Azure Notebooks
 - <https://notebooks.azure.com/>
